A CORNER OF OUR LABORATORY.

RESEARCH AND TOOL MAKING.

SPEAR & JACKSON claim to be the only firm specializing in saws and tools in the United Kingdom who have an up-to-date Research Department, and devote large sums yearly to experiments and tests.

This Department includes chemical, microscopic, and testing laboratories, and is equipped with every modern appliance required for this work.

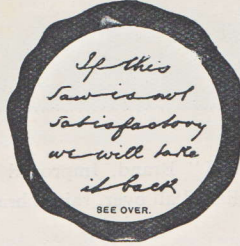

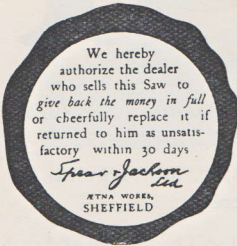

Many thousand chemical analyses, and also thousands of tests for hardness, temper, and physical properties, are made every year. *That is why Spear & Jackson's saws and tools are better than other brands.*

MICROGRAPHICAL APPARATUS.

HAND SAWS.

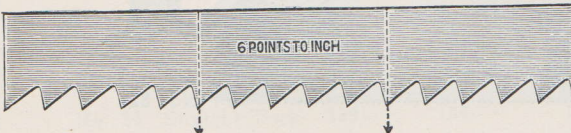

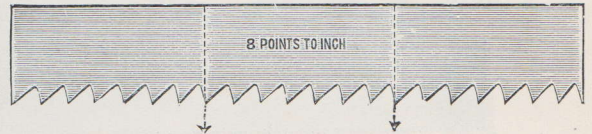

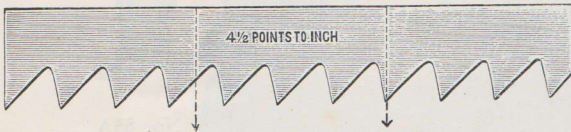

WARRANTY.

Every Spear & Jackson Saw carries our well-known "Money-Back" Guarantee.

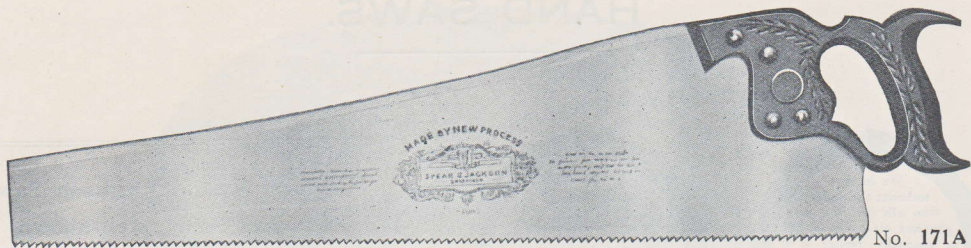

SIZES OF SAW TEETH.

The size of teeth is expressed by the number of "points" to the inch. Note that both extreme points are included, or in other words, "7 points to the inch" equals "6 teeth to the inch."

☐ Coarse Tooth Saws for Farmers and ordinary rough work should not be ordered as Rip Saws, but as Coarse Tooth Hand Saws.

HAND SAWS.

No. 171A

Vanadium Alloy Steel, S. & J.'s "Mermaid" Brand, Improved Temper, Mirror Polish,
Carved Hardwood Handles, polished all over, raised brass screws.

Standard sizes of Teeth 26 inches
5½, 6, 6½, 7 points to inch.

No. 171A Skew Back ... 248/- doz.

The above Saws are the best that can possibly be made, regardless of price. The blade is made from a secret alloy of Vanadium Steel, of great toughness, and will work longer than any other saw without sharpening, being at the same time more difficult to buckle in use. They will usually cut through nails or other hard materials in wood without damage, but are not guaranteed in this respect.

No. 88A

No. 82

Silver Steel, Warranted, London Spring. S. & J.'s "Mermaid" Brand, Improved Temper,
Mirror Polish. Raised brass screws. Selected **English** Beech Handles, polished all over.

We allow a maximum thickness of one gauge stronger than ordinary without extra charge.

CIRCULAR SAWS.

SPECIAL SHOW BOARD FOR SMALL CIRCULAR SAWS.

We are now supplying small Circular Saws of standard gauge, centre hole and teeth, in nests comprising one saw each 3, 4, 5, 6, 7, 8, 9, 10, 12 ins., and to each customer ordering this selection we give a beautifully finished standing Show Board, as illustrated, free of charge.

The Board is fitted with a nickel-plated bolt and nut so that any Saw can be easily detached, and, when sold, can be replaced by a similar Saw, thus keeping the range intact.

Price complete, with 9 Saws (3 to 12 inches), 79/- each.

For the convenience of customers, the following labels are attached to the reverse side of these Show Boards:—

EXTRA CAST STEEL CIRCULAR SAWS FOR WOOD.

SET AND SHARPENED READY FOR USE.

SPEAR & JACKSON'S "MERMAID" BRAND.

Net Retail Price

WARRANTY.

Every Saw is carefully examined before leaving our Works, and is warranted to be as true as it is possible to make it: evenly tempered, properly tensioned, and free from cracks, flaws, or split teeth. If found defective in any of these particulars it may be returned to us, and if on examination we are satisfied that the Saw is at fault, all necessary repairs will be made free of charge or a new Saw given in exchange, providing that it is returned within 30 days from date of receipt.

The practice of using a cold chisel or punch for re-toothing is almost certain to crack the plate. The filing of square corners in the gullets will also cause the same result, particularly in frosty weather. Our Warranty does not cover such cases, nor will we replace Saws spoilt by the temper being drawn in sharpening with an emery wheel. This operation requires extreme care, and we strongly recommend the use of the file in preference.

SPEAR & JACKSON LTD.

INSERTED TOOTH CIRCULAR SAWS.

Made with two different sizes of teeth, viz., Nos. 2 and 3. Both are suitable for general work in hard and soft woods.

No. 2 is the smallest and most suitable for Hand Feed Automatic Rope, and Roller Feed Benches of the smaller dimensions.

No. 3 is recommended for the heavier breaking down work on Automatic Rack and Travelling Carriage Saw Benches

The Standard¹ Blades are one gauge stronger at centre than at rim. This can be varied if specially ordered.

In the price we include: 1 extra set of teeth,
2 spare holders and one wrench.

EXTRAS.

Spare teeth, Nos. 2 and 3 ... 25/- per 100.
Spare holders ... 25/- doz.
Spare wrenches ... 5/6 each.

Q Saws of a smaller diameter than above list quoted for on receipt of specifications.

Q No extra charge for saws one gauge thicker or thinner than list.

Q We do not warrant saws thinner than one gauge below standard.

Q TAPER SAWS. If more than one gauge taper add 5% to list price for each gauge.

Q FOR EXPORT. We invariably supply blades one gauge thicker than standard (no extra cost) unless otherwise ordered.

BUTCHERS' TOOLS.

(For illustrations and prices of Back Saws and Bow Saws see pages 10 & 14.)

SPECIAL TEMPER.

Attention is drawn to the Special Temper of all Butchers' Back Saws, Bow Saws, and Cleavers for use on frozen carcasses. We have made a special study of this trade, and guarantee all these tools to give the best possible service.

THE TEST

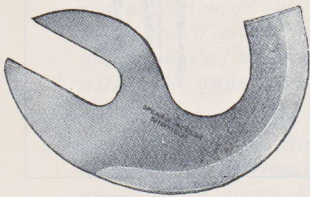

applied to every "NEVERFAIL" Cleaver and Chopper.

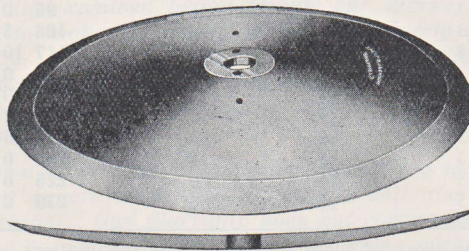

THE TEMPER of every "Neverfail" Cleaver and Chopper is tested by a hard blow on an iron bar.

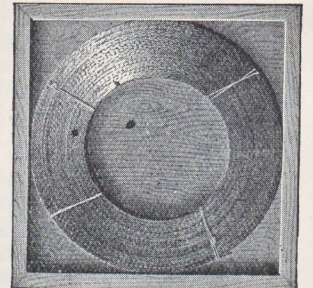

Iron Bar, showing marks made by "Neverfail" Cleavers in testing.

"NEVERBEND" SHOVELS.

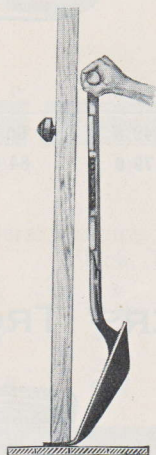

Fig. 6

Fig. 6 shows how we test "NEVERBEND" Round Nose Shovels, and
Fig. 7 a shovel after test.

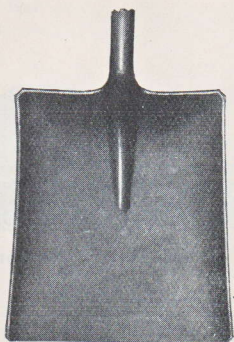

Fig. 7

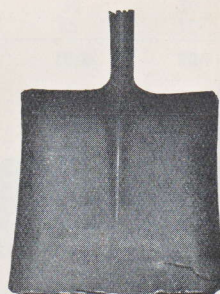

Fig. 8

Fig. 8 shows an ordinary shovel after test.

"Neverbend" shovels wear evenly and keep a good edge, the other sort wear any way and all turned up and three times the work to shovel with.

NEVERBEND.

ORDINARY SHOVEL.

From actual photographs—after approximately the same amount of work.

"Neverbend" Steel is so much better that thinner plates can be used and they weigh (medium size) about half a pound less—a fact greatly appreciated by the workmen, and tending to more work being done—and yet have a 50% to 100% longer life than ordinary grades.

“NEVERBEND” SAW STEEL SPADES.

Fig. 2.

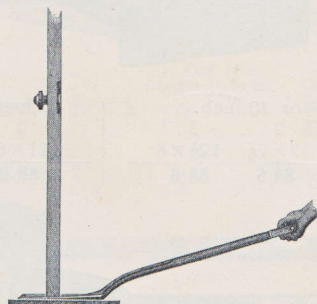

Fig. 1.

Fig. 3.

STRENGTH.

Fig. 1 shows the test which can be applied to “NEVERBEND” Spades by pressing the hand upwards towards the door. After test the spades are quite straight, as Fig. 2, but ordinary spades become bent as Fig. 3.

LIGHTNESS.

So strong are “NEVERBEND” Spades that we are able now to make them $\frac{1}{2}$ -lb. lighter than our old pattern, and the average run of other spades.

Now an ordinary digger makes about 12 strokes per minute. The saving in weight lifted per day of 8 hours is:

$$\frac{1}{2} \times 12 \times 60 \times 8 = 2,880 \text{ lbs.}$$

A saving of over **1½ Tons** lifted per day!!

That is not all, the saving in exertion of forcing the thinner blade into the ground is also very considerable.

WEARING PROPERTIES.

“NEVERBEND” blades are made of Saw Steel, and therefore keep their edge better and last longer before they are worn out. They will take an edge like a razor and are incomparable for cutting through roots, &c.

"NEVERBLUNT" SLASHERS AND BILL HOOKS.

The latest invention of S. & J.'s Research Department.

MADE FROM SAW STEEL.

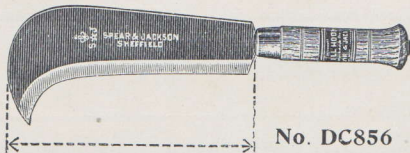

Will keep their edge 2 to 5 times longer than other Slashers without sharpening.

METHOD OF TESTING.

The block shows the test applied to every "NEVERBLUNT" Slasher and Bill Hook which must cut through a piece of iron wire 6 gauge thick.
